16th September 2026

Dear Sir/Madam

Brunt Hill Wind Farm ECU reference ECU00004654 -additional information called 'Grid Appraisal' July 2026.

1. Introduction

1.1 Friends of the Ochils have reviewed the additional information submitted by the Brunt Hill developer, Brunt Hill Limited, in relation to the provision of an assessment addressing the potential grid connection of the Wind Farm. We would wish to make the following comments and observations on the proposed connection.

2. Impact of the proposed connection

2.1 We appreciate that the proposed connection will be underground from the Revised Proposed Development on site substation to the sub station on the consented Craighead Wind Farm Site. As that UGC is to be placed underground, mainly along proposed tracks, we have no particular comments to make on the landscape impact of this cable nor on any impacts on recreational amenity.

2.2 However the proposed grid connection for the Brunt Hill development does not deal with the connection beyond the Craighead substation yet that connection will serve the Brunt Hill Wind Farm

as well as Craighead. We appreciate that the Craighead approval pre-dates the Raeshaw Farms v Scottish Ministers judgement and therefore that decision does not apply to Craighead. However, by only dealing with the grid connection to the Craighead substation we would argue that the full potential impact of the Brunt Hill Wind Farm grid connection is not fully assessed in the additional information. We would wish to see an indication as to how the Brunt Hill grid connection might be continued beyond the Craighead substation, with a clear indication that it too will be undergrounded.

2.3 In the circumstances detailed above we do not believe that the requirement to identify the route to the grid has been met.

Yours sincerely

Stuart Dean. Chair, Friends of the Ochils
